SUMMARY

Computer Science graduate (First Class Honours, Swansea University, 2025) who has completed the Digital Futures Frontier AI Programme, a 12-week full-time course in SQL, Python, Tableau, statistics and machine learning. Builds end-to-end analysis projects: cleaning and joining messy data, testing results against a baseline, and presenting findings in dashboards and web apps. Seeking a graduate or junior Data Analyst role.

EDUCATION

Digital Futures
Frontier AI Programme (Data and AI) *Jul 2026 - Sep 2026*

- Full-time, 12-week programme across five modules: AI and Data Essentials, Insight Analytics, Programmatic Data Wrangling, Predictive Modelling and Advanced AI Topics.
- SQL and data management: querying, CRUD operations, ERDs and ETL, with databases run locally and on Google Cloud and AWS.
- Analysis and reporting: EDA with pandas and NumPy, hypothesis and A/B testing, Matplotlib and Seaborn charts, and Tableau and Excel dashboards presented to non-technical audiences.
- Machine learning: linear and logistic regression, decision trees and random forests, with feature engineering, one-hot encoding and scaling.
- Data engineering: modular Python pipelines with Pydantic validation, logging and API integration, Streamlit deployment, Docker, BigQuery and Cloud SQL.

Swansea University Swansea, Wales
BSc Computer Science, First Class Honours *Sep 2022 - Jul 2025*

- Machine Learning assignment 99% (CIFAR-100 image classification with CNN and SVM); Data Science project 94% (Random Forest classifier).
- Web Service Development 82% (REST APIs in Spring Boot); App Development 84% (Android, Kotlin); Algorithms 75%; Database Systems 72% (MySQL, normalisation).

Bassaleg School Newport, Wales
A Levels: ICT (A), Biology (B), Chemistry (B). 8 GCSEs at A to B, including Maths and English*

CERTIFICATIONS

Google Cloud Certified: Generative AI Leader 2026

PROJECTS

Meta Data: Valorant Pro Pick Recommender | Python, pandas, scikit-learn, Streamlit Sep 2026 - Oct 2026
Capstone project, Digital Futures | valorant-agent-predictor.streamlit.app | GitHub

- Cleaned and joined three public Kaggle datasets with match dates scraped from vlr.gg (requests, BeautifulSoup) into a 3,262-map table, fixing duplicated player rows, a team-name mismatch that silently dropped 25 matches, and a stats file that leaked results.
- Built a pick recommender that places the professional team's actual pick in its top 3 for 91.3% of 1,032 unseen 2025 line-ups and 87.4% of 1,772 line-ups from 2026, 14 to 15 points above a most-played baseline.
- Tested whether agent picks predict match winners using time-based splits and tests written before they ran; found no evidence they do (50.8% accuracy against a 52.9% baseline).
- Presented the findings in a three-page Streamlit app and a slide deck written for a non-technical audience.

House Price Predictor | Python, pandas, scikit-learn, XGBoost Jul 2025 - Sep 2025
GitHub

- Built an end-to-end regression pipeline on the Kaggle House Prices dataset (1,460 homes, 79 features), covering missing-value imputation, outlier treatment, encoding and scaling.
- Used EDA to guide feature engineering, then compared Random Forest and XGBoost; XGBoost reached R^2 0.89 (RMSE about $29k) on held-out data, documented in a reproducible notebook.

MKWorld Lounge Stats | React, Node.js, Express, Recharts, Vitest Dec 2025 - Present
mkw-lounge-stats.vercel.app | GitHub

- Built a full-stack dashboard that aggregates competitive Mario Kart data from a public API, with player profiles, match history, a filterable leaderboard and side-by-side charts for up to four players.
- Wrote an Express API layer with in-memory caching, rate limiting and security headers (Helmet), deployed as Vercel serverless functions.

Image Recognition on CIFAR-100 | Python, CNN, SVM Nov 2024 - Dec 2024

- Compared CNN and SVM classifiers on the 100-class CIFAR-100 dataset and wrote up the method and results as a conference-style paper, marked at 99%.

EXPERIENCE

Website Designer May 2025 - Aug 2025
Ace Language Services *Newport, Wales*

- Designed and built a responsive website in HTML, CSS and JavaScript for a translation and interpreting company offering over 150 languages.
- Deployed it on Netlify and configured DNS for the client's domain.
- Added contact forms and on-page SEO, and refined features with the client after launch.

Festive Colleague 2021
Tesco *Risca, Wales*

- Served customers in a busy store during the Christmas peak.
- Worked with the team to resolve day-to-day operational issues.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript, Java, Kotlin

Data analysis: pandas, NumPy, Matplotlib, Seaborn, Jupyter, Tableau, Excel, Streamlit

Statistics and ML: EDA, hypothesis testing, A/B testing, regression, classification, scikit-learn, XGBoost, SHAP

Databases and cloud: MySQL, BigQuery, Cloud SQL, MongoDB, Firestore, Google Cloud, AWS, Docker

Tools: Git, GitHub, VS Code, PyCharm, Pydantic, REST APIs
